

DEVAYAN MANDAL

Full Stack AI Native / Forward Deployed AI Engineer & Open Source Contributor - Open to Remote Work

devayanmandal@gmail.com

linkedin.com/in/dev-ma | github.com/devtechedge

PROFESSIONAL SUMMARY

Forward Deployed AI Engineer with 10 years of self-directed production work and 30+ shipped systems across multi-agent platforms, MCP integrations, deterministic RL evaluation, and real-time infrastructure. Merged 24 upstream pull requests across TypeScript, Python, and Rust in widely used projects including Biome, pnpm, and node-postgres, owning each change from root cause through tests, review, and release.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Rust, SQL, R, Bash

AI & Agents: LangGraph, LangChain, LangServe, LangSmith, Model Context Protocol (MCP), multi-agent orchestration, supervisor routing, Reflexion loops, human-in-the-loop gates, hybrid RAG, RLVR environments, deterministic evaluation, prompt engineering, Ollama, Gemini, OpenAI-compatible providers

Frontend: React 19, Next.js 16, TanStack Start/Router/Query, Tailwind v4, Vite, Framer

Motion, Expo, Three.js, React Three Fiber, HTML5 Canvas, SVG

Backend & Data: FastAPI, Node.js, Drizzle ORM, Prisma, SQLAlchemy, PostgreSQL (pgvector), Neon, Supabase, SQLite, Pydantic, Zod, Stripe

Realtime & Observability: SSE, WebSockets, Socket.io, replayable traces, OpenTelemetry-shaped tracing, LangSmith evaluation pipelines

Cloud & DevOps: Vercel, AWS, Microsoft Azure, GitHub Actions CI/CD, serverless, scheduled pipelines, Vitest, pytest, Playwright, Biome

Web3 & Blockchain: Solidity, OpenZeppelin, Foundry, viem, wagmi, ethers.js, Safe Protocol Kit, RainbowKit, Reown AppKit, Base L2, blockchain and wallet infrastructure

Practices: Six Sigma DMAIC, bounded autonomy, retrieval-bounded generation, AST-sandboxed grading, cost-aware routing, threat-model documentation, Git, Changesets

PROFESSIONAL EXPERIENCE

LATTICE AI LABS

Full Stack AI Native / Forward Deployed AI Engineer | January 2016 - Present | Remote

- Architected and shipped 30+ production-grade systems spanning autonomous agents, RL evaluation environments, real-time observability, and high-throughput web applications.
- Built AEGIS, an enterprise AI ops cortex where a LangGraph supervisor routes 6 specialist agents across 7 agentic loops, with hybrid RAG, human-in-the-loop gates, LangSmith evaluation gates, and a live SSE dashboard. Live: aegis-agent-api.vercel.app/ui
- Built Synthesis, an autonomous research platform running cyclic Reflexion workflows with HITL approval gates, and AAROP, an inspectable 6-phase reasoning engine with cost-aware routing, circuit breakers, RAG memory, and replayable traces. Live: synthesis-gold.vercel.app | aarop.vercel.app
- Authored 3 official RLVR environments on the Prime Intellect Environments Hub (calendar-math, meeting-slot, unit-fix) using deterministic UTC sweep-line solvers and AST-sandboxed graders, removing LLM-as-judge variance.
- Implemented MCP servers and clients across Stdio and StreamableHTTP/SSE transports with client-side sampling and roots-based security boundaries; shipped HoldSlot, a WebMCP implementation for the OpenAI WebMCP Challenge 2026.
- Shipped Jobrow, a live US tech job board indexing 5,000+ still-open roles across employer ATS boards (Greenhouse, Ashby, Lever) on TanStack Start, React 19, and Neon Postgres, with an Expo mobile client and a GitHub Actions crawl pipeline running 4x daily. Live: jobrow.vercel.app
- Also delivered Veritas (LangGraph research agent), Cadence (healthcare agent with 5-layer clinical memory), a real-time chaos engineering platform with self-healing services and sub-second WebSocket telemetry, Pulsar (Base L2 GPU marketplace on Foundry contracts), and a serverless daily AI news agent on GitHub Actions.
- Work AI-native across the full stack using frontier coding and reasoning models, with emphasis on rapid iteration, test-driven validation, repository-specific contribution policies, and reproducible upstream delivery.

SPECTRAL QUANTITATIVE TRADING

Quantitative Crypto Trader & Derivatives Strategist | September 2016 - Present | Remote

- Manage diversified proprietary capital across tier-1 exchanges including Binance, Coinbase, Bitget, and MEXC, and on-chain protocols including Hyperliquid, Uniswap v3, Aave, and GMX.
- Built and ran automated grid, DCA, and Martingale bots on Pionex and Binance to capture spread and volatility in ranging markets.
- Executed delta-neutral basis and funding-rate arbitrage between spot and perpetuals, plus concentrated-liquidity and lending-loop strategies on-chain.
- Applied TWAP/VWAP execution on illiquid pairs, with VaR limits, drawdown caps, and Sharpe-ratio optimization governing position sizing and portfolio risk.

OPEN SOURCE CONTRIBUTIONS

Merged upstream:

<<<LEDGER:MERGED_LIST>>>

- EmbarkStudios/cargo-about #319 (TypeScript) - write the closing quote when appending a synthesized license field Merged Sep 2026. github.com/EmbarkStudios/cargo-about/pull/319
- EmbarkStudios/cargo-about #320 (TypeScript) - fix subslice offsets when synthesizing the license field Merged Sep 2026. github.com/EmbarkStudios/cargo-about/pull/320
- astral-sh/ruff #28542 (Rust) - PY1002 diagnostic in complex_if_statement_in_stub.rs now names the stub-file context, so if tests in .pyi files report as needing a simple comparison against sys.platform or sys.version_info instead of reading as a claim about the flagged test itself. Merged Sep 2026. github.com/astral-sh/ruff/pull/28542
- leo-aa88/reviewgate #144 (Python) - adds a configurable excessive code-comment verbosity check to the core review engine: three signals computed from added patch lines only, so a PR is never penalised for comments it did not touch, with a single-pass lexer that tracks string literals, heredocs and template literals so runtime data is never counted as commentary. Merged Sep 2026. github.com/leo-aa88/reviewgate/pull/144
- PyO3/maturin #3302 (Rust) - Windows interpreter discovery no longer panics on non-UTF-8 command output. find_all_windows() decodes py --list-paths and conda info -e with String::from_utf8_lossy instead of unwrapping str::from_utf8, so a localized install that emits undecodable bytes skips that line instead of aborting the build. Added a unit test covering the non-UTF-8 decode path. Merged Sep 2026. github.com/PyO3/maturin/pull/3302
- stellar/stellar-docs #2859 (MDX) - added the --enable-core-manual-close flag to the Local section of the Network Modes page, so the parameter list no longer omits a flag the quickstart container ships, with a cross-link to the Manual close mode section noting that only the local configuration sets NODE_IS_VALIDATOR. Merged Sep 2026. github.com/stellar/stellar-docs/pull/2859
- stellar/stellar-docs #2850 (MDX) - documented Quickstart's undocumented '--enable-core-manual-close' flag in the advanced usage docs, covering the 'MANUAL_CLOSE' setting it writes into the generated core config, the 'manualclose' endpoint that advances one ledger per call, and loopback-bound startup examples for macOS, Linux, and Windows. Merged Sep 2026. github.com/stellar/stellar-docs/pull/2850
- ssf0409/tracelens #140 (Python) - markdown table cells in the report generator are now escaped with html.escape in addition to pipe and newline handling. Task ids or gate values containing pipes, line breaks, or HTML metacharacters no longer break the per-task and baseline-gate tables piped into \$GITHUB_STEP_SUMMARY, and no cell can open a raw HTML element. Merged Sep 2026. github.com/ssf0409/tracelens/pull/140
- stellar/stellar-docs #2849 (MDX) - reworked the address conversion example to propagate the fallible 'Result<Address, ConversionError>' instead of unwrapping malformed XDR, and documented that untrusted XDR must be handled rather than panicking. Merged Sep 2026. github.com/stellar/stellar-docs/pull/2849
- stellar/stellar-docs #2853 (MDX) - reconciled memo framing in the pooled accounts guide so memos read as the legacy mechanism still in active use and muxed accounts as preferred going forward. Merged Sep 2026. github.com/stellar/stellar-docs/pull/2853
- stellar/stellar-docs #2851 (MDX) - qualified the Freightier HTTPS requirement, noting that 'http://localhost' is already a Potentially Trustworthy origin under W3C Secure Contexts so loopback needs no TLS. Merged Sep 2026. github.com/stellar/stellar-docs/pull/2851
- pytest-dev/pytest-env #262 (Python) - documented that pytest.toml and .pytest.toml accept the native [pytest] env table, not only the plugin-specific [pytest_env] section. Merged Sep 2026. github.com/pytest-dev/pytest-env/pull/262
- pnpm/pnpm #14863 (Rust/TypeScript) - fixed startup crashes on FreeBSD and other non-Windows Unix-like platforms by making default_store_dir use the Unix fallback path; added platform-specific regression coverage. Merged Sep 2026.

github.com/pnpm/pnpm/pull/14863

- web-infra-dev/rspress #3678 (TypeScript) - fixed a Search initialization race by awaiting FlexSearch addAsync indexing before LocalProvider.init() resolves, preventing early searches from incorrectly returning no results on larger sites; focused regression-oriented fix. Merged Sep 2026. github.com/web-infra-dev/rspress/pull/3678
- recharts/recharts #7805 (TypeScript) - removed tabIndex={-1} from z-index portal SVG <g> layers so empty groups are not pointer-focusable and WebKit does not draw geometry-traced focus rings; added regression coverage asserting no layer carries a tabIndex attribute. Merged Sep 2026. github.com/recharts/recharts/pull/7805
- brian/node-postgres #3772 (JavaScript) - stopped Connection.sync() from incorrectly setting the internal _ending flag, preventing false suppression of subsequent socket errors; added unit coverage for Sync vs disconnect semantics. Merged Sep 2026. github.com/brian/node-postgres/pull/3772
- pnpm/pnpm #14756 (Rust/TypeScript) - preserved existing dependency range operators and npm:/jsr: protocol prefixes during pnpm update, including prerelease and exact-version handling. Merged Sep 2026. github.com/pnpm/pnpm/pull/14756
- pnpm/pnpm #14754 (Rust) - fixed non-recursive pattern runs with --no-bail so matching scripts continue executing and failures are aggregated correctly; added concurrent and sequential regression tests. Merged Sep 2026. github.com/pnpm/pnpm/pull/14754
- pnpm/pnpm #14753 (Rust/TypeScript) - fixed lockfile:false being ignored when automatic package-manager switching downloaded the configured engine; added unit and filesystem-backed regression coverage across Rust and TypeScript paths. Merged Sep 2026. github.com/pnpm/pnpm/pull/14753
- SQLMesh/sqlmesh #6040 (Python) - moved ModelTest.create_test() off concurrent worker threads to eliminate a time_machine/ttl_cache race in sqlmesh test; verified the focused race regression repeatedly. Merged Sep 2026. github.com/SQLMesh/sqlmesh/pull/6040
- anza-xyz/kit #2032 (TypeScript) - restored number predicates in the getPatternMatchCodec advanced guide to match current codec typing. Merged Sep 2026. github.com/anza-xyz/kit/pull/2032
- better-auth/better-auth #11208 (TypeScript) - added regression coverage locking the /phone-number/verify OpenAPI requestBody after a Zod .and(z.record()) intersection; tests only, no production generator changes. Merged Sep 2026. github.com/better-auth/better-auth/pull/11208
- biomejs/biome #11667 (Rust) - ported the unicorn better-dom-traversing rule into Biome's nursery linter; +1,972 lines across 17 files and 7 commits, released to 13 packages via changeset. Merged Sep 2026. github.com/biomejs/biome/pull/11667
- thirdweb-dev/js #8938 (TypeScript) - fixed useTokenQuery error handling so 401/429/timeout failures rethrow instead of rendering a false "Token Not Supported" state in CheckoutWidget; added tests and a patch changeset. Merged Sep 2026. github.com/thirdweb-dev/js/pull/8938
